

"Your purpose in life is to use your gifts and talents to help other people."

About Me

Hello! I'm Monikka(M oh - nee - k ah). I'm a Front-End Engineer with working proficiency in Git, HTML, CSS, SASS, JavaScript, Jest, Cypress, TypeScript, and React that would love the opportunity to use my talents in these technologies. In my 5 years of working in Information Technology (IT Systems Administration, Help Desk, and Front-End Engineering), I dedicate my time to master my responsibilities, grow outside of work hours, and go beyond in each position I've worked in.

Outside of work I'm typically maintaining skills by working on side projects, working with my Software mentor, or studying new technologies to take my skills to the next level. I also enjoy music, reading, and travel.

Why FORM?

FORM appears to be a company that promotes diversity and has a goal provide a quality products to it's customers as seamless as possible. FORM seems to to make sure the customers feel comfortable and have success using their products. I would be a great fit for FORM because the objective of the company aligns with how I live my life. Using my knowledge and talents to create and assists with making the world better.

Why Me?

My love of learning, problem solving skills, and willingness to always help has gotten me pretty far in my career. I plan on continuing that because it makes work fun, being able to collaborate with like minded people and to be able to share ideas. Discovering Front-End development has shown me that I can have a career where I can apply these strengths everyday. Developing these strengths throughout my career has shown me I can positively impact others on a larger scale. I'm a team player that is open to constructive criticism and helping others with any knowledge I have.

Thank you for taking the time to read my cover letter. I look forward to speaking with you soon.

Sincerely,

Monikka Edgeston
